Introduction vii

Committees ix

Editorial Board x

Invited papers

Advances in our understanding of vortex dynamics in bluff body wakes
C.H.K. Williamson (Ithaca, USA) 3
Near wake flows behind two- and three-dimensional bluff bodies
P.W. Bearman (London, UK) 33
Comparison of LES and RANS calculations of the flow around bluff bodies
W. Rodi (Karlsruhe, Germany) 55
Some observations on the state of bluff-body aeroelasticity
R.H. Scanlan (Baltimore, USA) 77
Predicting the cross-wind response of masts and structural members
W.H. Melbourne (Clayton, Australia) 91
Convex control design for vibration induced by uncertain excitations
D.J. Leo (Toledo, USA), D.J. Inman (Blacksburg, USA) 105

Commentaries by invited speakers

Vortex-induced motion
P.W. Bearman 123
Near wake flows
P.W. Bearman 125
Tall flexible structures
P.W. Bearman 129
Numerical methods
W. Rodi 131
Commentary
R.H. Scanlan 133
Status of building aerodynamics research
W.H. Melbourne 135

Single cylinder aerodynamics

Drag reduction of a square prism by flow control using a small rod
T. Igarashi (Yokosuka, Japan) 141
A method for the reduction of bluff body drag
A. Prasad, C.H.K. Williamson (Ithaca, USA) 155
Characteristics of flows over an asymmetrically grooved circular cylinder in the transitional regimes
Y.C. Leung, C.H. Wong, N.W.M. Ko (Hong Kong, China) 169
Influence of afterbody rounding on the pressure drag of an axisymmetrical bluff body
G. Buresti (Pisa, Italy), R. Fedeli (Maranello, Italy), A. Ferraresi (Pisa, Italy) 179
Numerical simulation of unsteady low-Reynolds number flow around rectangular cylinders at incidence
A. Sohankar (Göteborg, Sweden), C. Norberg (Lund, Sweden), C. Norberg (Göteborg, Sweden) ... 189
Vortex-induced oscillations in inclined cables
F.S. Hover, S.N. Miller, M.S. Triantafyllou (Cambridge, USA) 203

Elsevier Science B.V.

Force measurements and flow visualization of bluff bodies in oscillatory flow
A. Okajima (Kanazawa, Japan), T. Matsumoto (Kobe, Japan), S. Kimura (Kanazawa, Japan) ... 213
An investigation of the effect on vortex shedding of a sudden transverse disturbance applied to a circular cylinder
J.R. Meneghini (São Paulo, Brazil), P.W. Bearman (London, UK) ... 229
Computation of unsteady flow over a half-cylinder close to a moving wall
S. Kumarasamy, J.B. Barlow (USA) ... 239

Multiple cylinder aerodynamics

Development of a method for calculating galloping amplitudes considering nonlinear aerodynamic coefficients measured with the forced oscillation method
M. Hortmanns, H. Ruscheweyh (Aachen, Germany) ... 251
Aerodynamic characteristics of closely and rigidly connected cables for cable-stayed bridges
H. Maeda, Y. Kubo, K. Kato, S. Fukushima (Tobata, Japan) ... 263
Interactive flow around two circular cylinders of different diameters at close proximity. Experiment and numerical analysis by vortex method
T. Tsutsui, T. Igarashi (Yokosuka, Japan), K. Kamemoto (Yokohama, Japan) ... 279
Vortex-induced oscillations of two flexible circular cylinders coupled mechanically
D. Brika, A. Laneville (Sherbrooke, Canada) ... 293
A new approach for determining the onset velocity of galloping instability taking into account the nonlinearity of the aerodynamic damping characteristic
C. Ziller, H. Ruscheweyh (Aachen, Germany) ... 303

Vortex induced motion and near-wake flows

Simulation of the effects of body shape on lock-in characteristics in pulsating flow by the discrete vortex method
N. Steggel, N. Rockliff (Guildford, UK) ... 317
Nonlinear amplitude dependent self-limiting model of lock-in phenomenon at vortex excitation
A. Flaga (Cracow, Poland) ... 331
Investigation of relative effects of mass and damping in vortex-induced vibration of a circular cylinder
A. Khalak, C.H.K. Williamson (Ithaca, USA) ... 341
The effect of surface protrusions on the near wake of a circular cylinder
S.-J. Lee, H.-B. Kim (Pohang, South Korea) ... 351

General and vehicle aerodynamics

Characteristics of buffeting forces on flat cylinders
K. Kimura, Y. Fujino, S. Nakato, H. Tamura (Tokyo, Japan) ... 365
Vortex-induced motions of a tethered sphere
R. Govardhan, C.H.K. Williamson (Ithaca, USA) ... 375
Vortex shedding from a ring in oscillatory flow
I.P. Castro (Guilford, UK) ... 387
Effects of surface roughness on the universal Strouhal number over the wide Reynolds number range
T. Adachi (Osaka, Japan) ... 399
Mean wind and turbulence characteristics due to induction effects near wind turbine rotors
D.E. Neff, R.N. Meroney (Fort Collins, USA) ... 413
Wind turbulence effects on aerodynamic noise with relevance to road vehicle interior noise
C. Peric, S. Watkins, E. Lindqvist (Melbourne, Australia) ... 423
High Reynolds number wind tunnel experiments on trains
E. Willemsen (Emmeloord, The Netherlands) ... 437

Building aerodynamics (wind loads)

Wind loads on boundary walls: Full-scale studies
A.P. Robertson, R.P. Hoxey, J.L. Short (Silsoe, UK), W.A. Ferguson, P.A. Blackmore (Garston, UK) 451
Effect of turbulence and its scales on the pressure field on the surface of a three-dimensional square prism
M.M. Sitheeq, A.K.S. Iyengar, C. Farell (Minneapolis, USA) 461
A comparison of response predictions for a rough cone from pressure and balance measurements
R.G.J. Flay (Auckland, New Zealand), B.J. Vickery (London, Canada) 473
Computer simulation of fluctuating wind pressures on low building roofs
S. Kumar, T. Stathopoulos (Montreal, Canada) 485
Codification of wind loads on buildings using bluff body aerodynamics and climatological data bases
E. Simiu (Gaithersburg, USA), T. Stathopoulos (Montreal, Canada) 497
Correlation structure of random pressure fields
A. Kareem (Notre Dame, USA) 507

Building aerodynamics (low-rise)

Importance of turbulence for the prediction of surface pressures on low-rise structures
H.W. Tieleman (Blacksburg, USA), T.A. Reinhold (Clemson, USA), M.R. Hajj (Blacksburg, USA) 519
Pressures on a $\frac{1}{10}$ scale model of the Texas Tech Building
J.C.K. Cheung, J.D. Holmes, W.H. Melbourne (Clayton, Australia), N. Lakshmanan (Madras, India), P. Bowditch (Highett, Australia) 529
On frequency-domain analysis of the relation between incident turbulence and fluctuating pressures
M.R. Hajj, I.M. Janajreh, H.W. Tieleman (Blacksburg, USA), T.A. Reinhold (Clemson, USA) ... 539
Correction of wind-tunnel pressure coefficients for Reynolds number effect
R.P. Hoxey, A.P. Robertson, G.M. Richardson, J.L. Short (Silsoe, UK) 547
Correlation of internal and area-averaged external wind pressures on low-rise buildings
F. Beste (Aachen, Germany), J.E. Cermak (Fort Collins, USA) 557
On the influence of v and w component turbulence on roof pressures beneath conical vortices
C.W. Letchford (Brisbane, Australia), R. Marwood (Oxford, UK) 567
Structure of conical vortices related with suction fluctuation on a flat roof in oblique smooth and turbulent flows
H. Kawai (Saitama, Japan) 579
Conical vortex movement and its effect on roof pressures
R. Marwood, C.J. Wood (Oxford, UK) 589
Flow visualization and measurement on the roof of the Texas Tech building
P.P. Sarkar, Z. Zhao, K.C. Mehta (Lubbock, USA) 597

Building aerodynamics (high-rise and analysis)

Spectral characteristics of wind induced pressures on a full scale building in suburban terrain
C.P.W. Geurts, H.S. Rutten, J.A. Wisse (Eindhoven, The Netherlands) 609
Full-scale measurement of wind-induced internal pressures in a high-rise building
N. Kato, Y. Niihori, T. Kurita (Kanagawa, Japan), T. Ohkuma (Yokohama, Japan) 619
Dynamic wind pressures acting on a tall building model – proper orthogonal decomposition
H. Kikuchi (Tokyo, Japan), Y. Tamura (Kanagawa, Japan), H. Ueda (Chiba, Japan), K. Hibi (Tokyo, Japan) 631
Wavelet analysis of the relation between atmospheric wind and pressure fluctuations on a low-rise building
D.A. Jordan (Charlottesville, USA), M.R. Hajj, H.W. Tieleman (Blacksburg, USA) 647

Analysis interpretation modeling and simulation of unsteady wind and pressure data
K. Gurley, A. Kareem (Notre Dame, USA) 657
Wavelet study of approach-wind velocity and building pressure
B. Bienkiewicz, H.J. Ham (Fort Collins, USA) 671
Application of autoregressive modeling in proper orthogonal decomposition of building wind pressure
S.H. Jeong, B. Bienkiewicz (Fort Collins, USA) 685
Eigenvector modes of fluctuating pressures on low-rise building models
J.D. Holmes (Victoria, Australia), R. Sankaran (North Ryde, Australia), K.C.S. Kwok (Sydney, Australia), M.J. Syme (Highett, Australia) 697
Characterization of turbulence scales in the atmospheric surface layer with the continuous wavelet transform
D.A. Jordan (Charlottesville, USA), M.R. Hajj, H.W. Tieleman (Blacksburg, USA) 709

Aerodynamics of tall flexible structures

A numerical algorithm for the aerodynamic identification of structures
G. Solari, L.C. Pagnini, G. Piccardo (Genova, Italy) 719
An experimental study on vortex-induced vibration of a circular cylinder tower at a high wind speed
T. Kitagawa, T. Wakahara, Y. Fujino, K. Kimura (Tokyo, Japan) 731
A study on wind-induced vibration of super high rise building by multi-degree-of freedom model
R. Yoshie, H. Kawai, M. Shimura, R. Wei (Saitama, Japan) 745
Quasi-static versus dynamic space wind response of slender structures
E. Juhásová (Bratislava, Slovak Republic) 757

Bridge aerodynamics

Introduction of a modal decomposition and reassemblage method for the multi-dimensional unsteady aerodynamic force measurement
H. Yamada, T. Miyata (Yokohama, Japan) 769
Fluid dynamic derivatives: Marine and wind engineering approaches
A.G. Jensen (Lyngby, Denmark) 777
Span-wise structure of lift and overturning moment on a motionless bridge girder
J. Bogunovic Jakobsen (Stavanger, Norway) 795
Vibrational damper for cables of the Tsurumi Tsubasa bridge
H. Takano, M. Ogasawara, N. Ito, T. Shimosato (Tokyo, Japan), K. Takeda, T. Murakami (Kawasaki, Japan) 807
Effects of handrails on separated shear flow and vortex-induced oscillation
F. Nagao, H. Utsunomiya (Tokushima, Japan), E. Yoshioka (Tokyo, Japan), A. Ikeuchi, H. Kobayashi (Tokushima, Japan) 819
Inter-relations among flutter derivatives
R.H. Scanlan, N.P. Jones, L. Singh (Baltimore, USA) 829
Discussion on aeroelastic detail and control in the flutter occurrences of long-span bridges
T. Miyata, H. Yamada, K. Kazama (Kanagawa, Japan) 839
Performance of streamlined bridge decks in relation to the aerodynamics of a flat plate
G.L. Larose, F.M. Livesey (Lyngby, Denmark) 851
Half-circular and half-elliptic edge modifications for increasing aerodynamic stability of stress-ribbon pedestrian bridges
T. Yoshimura, Y. Mizuta (Fukuoka, Japan), M.G. Savage (Ottawa, Canada), G. Liu (Fukuoka, Japan) 861
Torsional flutter of bluff bodies
M. Matsumoto, Y. Daito, F. Yoshizumi, Y. Ichikawa, T. Yabatani (Kyoto, Japan) 871

Atmospheric flow and dispersion

Measurements of topographic multipliers and flow separation from a steep escarpment.
Part I. Full scale measurements
J.D. Holmes (Clayton, Australia), R.W. Banks, P. Paevere (Highett, Australia) 885
Measurements of topographic multipliers and flow separation from a steep escarpment.
Part II. Model-scale measurements
M.J. Glanville, K.C.S. Kwok (Sydney, Australia) 893
Anisotropic turbulence in the atmospheric surface layer
P.J. Richards, S. Fong (Auckland, New Zealand), R.P. Hoxey (Silsoe, UK) 903
Wind-tunnel investigation of the effect of vehicle motion on dispersion in urban canyons
W. Pearce, C.J. Baker (Nottingham, UK) 915
Gaussian puff model of an urban street canyon
D.M. Hargreaves, C.J. Baker (Nottingham, UK) 927

Numerical investigations and experimental techniques

Computational aspects of trailing vortices
S.A. Ragab, K.S. Youssef (Blacksburg, USA) 943
A new method for actively suppressing flutter of suspension bridges
S. Preidikman, D.T. Mook (Blacksburg, USA) 955
A 3-D tolerant wind tunnel for general wind engineering tests
L. Kong, G.V. Parkinson (Vancouver, Canada) 975
Further investigation of the blockage-tolerant wind tunnel technique
M.J. Glanville, K.C.S. Kwok (Sydney, Australia) 987
The blockage effects for an oscillating rectangular cylinder at moderate Reynolds number
A. Okajima, D. Yi, S. Kimura, T. Kiwata (Ishikawa, Japan) 997
